QUALITY THOUGHT

SELENIUM with JAVA – Mini Project

Note: Read and understand the assignment before starting it.

Project Type: Real-Time Automation Project

Application: Test Automation Practice

Selenium Mini Project – UI Automation

Part A: Tasks (Basics and Intermediate)

T1: Browser Initialization

Launch Chrome browser

Navigate to application

Maximize window

Verify page title

T2: Textbox Handling (Form Section)

Enter:

Name

Email

Phone

Address

Validate all inputs using getAttribute("value")

T3: Radio Button (Gender)

Select Male

Select Female

Validate only one selection at a time

T4: Checkbox Handling (Days)

Select multiple days (Mon, Wed, Sun)

Deselect one option

Validate final selected values

Note: Handle using List<WebElement> + loop

T5: Dropdown Handling (Country)

Select "India"

Validate selected option

Print all available options

T6: Multi-Select Dropdown (Colors)

Select:

Red

Blue

Green

Validate all selected options

Use getAllSelectedOptions()

T7: Sorted List Handling

Select:

Cat

Dog

Validate selections

Print all available animals

T8: Date Pickers (3 Types)

Enter date manually

Select date from calendar

Select date range

T9: Form Submission

Click Submit

Validate submission behavior

T10: File Upload

Upload single file

Upload multiple files

Validate file name displayed

T11: Static Web Table

Print all rows

Count rows & columns

Fetch specific data (e.g., Selenium price)

T12: Dynamic Web Table

Fetch:

CPU of Chrome

Memory of Firefox

Validate extracted values

Part B: Tasks (Advanced UI)

T13: Pagination Table

Navigate across pages

Select product checkbox

Count total pages

T14: Tabs Handling

Click each tab

Validate content change

T15: Dynamic Button

Click START button

Handle dynamic state

T16: Alerts Handling

Simple Alert → Accept

Confirmation Alert → Accept / Dismiss

Prompt Alert → Send text + Accept

T17: New Tab & Window Handling

Open new tab

Switch control

Perform action

Switch back

T18: Mouse Hover

Hover on "Point Me"

Click dropdown option

T19: Double Click

Double click button

Validate text copied

T20: Drag and Drop

Drag element → Drop target

Validate success

Part C: Tasks (Real-Time Challenges)

T21: Slider Handling

Move slider

Validate price range change

T22: SVG Elements

Identify SVG

Perform click action

T23: Scrolling Dropdown

Scroll to dropdown

Select value

T24: Labels & Links

Click:

Mobile labels

Laptop links

Validate navigation

T25: Broken Links Validation

Click all error links

T26: Section Forms

Submit forms in:

Section 1

Section 2

Section 3

T27: Download Files

Trigger download

Validate file exists

T28: Footer & Navigation

Click footer links

Validate page navigation

T29: End-to-End Flow

Fill form

Select options

Submit

Validate full workflow

T30: Browser Closure

Close browser

Quit session

General Guidelines

(Selenium with Java – Automation Testing Practice Project)

- ✓ Use Selenium WebDriver with Java as the automation technology.
- ✓ Automate the application: https://testautomationpractice.blogspot.com/
- ✓ Use Eclipse / IntelliJ IDEA as the IDE
- ✓ Configure browser drivers correctly for Chrome, Firefox, and Edge.
- ✓ Execute scenarios step by step and verify results in the browser and console.
- ✓ Use your own understanding and logic while implementing scenarios.
- ✓ Avoid direct copy–paste from online sources.
- ✓ Create a single Selenium Java project for this assignment.
- ✓ Each task must be implemented in a separate Java class file.
- ✓ Class names must clearly indicate the scenario number and purpose

- ✓ (Example: Task01_LaunchChrome, Task30_Browser Closure).
- ✓ Use one base class (optional but recommended) for:

. Browser setup . Driver initialization . Browser teardown

- ✓ No multiple tasks inside a single class.

Project Submission Format

Create a folder named: MiniProject_YourName

Include the following:

☐ Selenium Java Project Folder

☐ Separate Java class files for each scenario

☐ Screenshots (if captured)

☐ Execution proof (console output screenshots, if required)

Final Submission

☐ Compress the folder into a .zip file

☐ Upload the zip file to the GitHub repository as instructed by the trainer
